

PROJECT MANAGEMENT — MEDICAL MANUFACTURING FACILITY IMPROVEMENT

APPROACH

- Provide project management support for the renovation of a client's UK manufacturing plant from concept to delivery
- Compile quality-associated documentation, including URs, change controls, and critical system drawings and system reference files
- Plan project from design through construction and commissioning
- Manage project risk, resources, and budget control to ensure the project is completed on time to the required standards
- Manage EHS requirements and subcontractors
- Lead design review meetings to promote innovation and discussion
- Produce monthly reports and presentations for communication to the senior leadership team
- Share best practices from process engineering experience
- Provide technical and project leadership in multiskilled teams
- Act as a liaison between stakeholders, designer, and construction companies to ensure good communication about all activities

RESULTS

- Planned project from design through construction and commissioning
- Ensured project was completed on time by managing project risk, resources, and budget
- Compiled quality-associated documentation, including URs, change controls, and critical system drawings and system reference files

KEY TECHNOLOGIES

- Project management
- GMP
